

## LODA linear motion solutions

Linear motor technology offers highly dynamic and ultra-silent motion for various applications. In many applications is linear technology reasonable replacement of classical rotational motors with mechanisms transforming rotation into linear motion.

### Our services

- Development of customized solutions and drive integration into your specific product
- Full technical support in development and production phase
- Development/Support team located in Europe-Czech Republic
- Drive mass production in motor company with more than 25 years of experience

### Features

- Silent motion and simplicity compared to belt or screw drives
- High dynamics
- Reduction of moving parts

### Application examples

- Sliding door drives
- Industrial machines axes
- Home automation
